Locomotive pieces donated to local museum

Two pieces of what are believed to be parts of locomotive #508 which tumbled into the Saint John River on June 21, 1900 following the collapse of the CPR railway bridge in Grand Falls were recently donated to the Grand Falls Museum by Eric Ouellette, a professional engineer who has been spearheading the search to locate and recover the locomotive from the bottom of the riverbed. During his search of the riverbed in 2006, Ouellette recovered what he believes are pieces of a braking cylinder combination. He plans to relaunch his efforts this summer in order to locate and recover the locomotive. Jeannine Watson, member of the Grand Falls Historical Society, accepted the donated pieces on behalf of the organization which plans to display the items in its Museum. (Madeleine Leclerc photo)
